Global Relief Technologies

www.grt.com

Portsmouth, NH

Global Relief Technologies's business model

Global Relief Technologies develops software that enables government agencies, NGOs, and other international groups to quickly collect and report critical data in real time. Its patented Rapid Data Management System has been extensively utilized by organizations conducting humanitarian assistance and disaster relief missions around the world to accurately gain and maintain situational awareness of fluid events happening on the ground and thus more effectively coordinate and allocate their response and relief efforts. In response to this year's earthquake in Haiti, GRT's technology is being used to track vital statistics of amputees and other victims.
